ABSTRACTED-PUB-NO: JP 02286608A

BASIC-ABSTRACT:

An insecticidal compsn. contains a bactericidal seed extract of Citrus plants and (poly)glycerin fatty acid ester(s).

Seed oil having antibacterial activity, e.g. grapefruit, lemon and orange, is extracted with solvents, e.g. acetone, alcohols, glycerin and propylene glycol. The oil is mixed with (poly)glycerin fatty acid esters, e.g. oleic acid, linoleic acid, ricinoleic acid and linolenic acid at ratios of 1:0.0001-1, pref. 1:0.00005-0.5 pts. wt. The seed extract and (poly)glycerin fatty acid ester are contained in the compsn. at about 1-80, pref. 5-70%, and at about 0.0001-30, pref. 0.002-25%, respectively. Alcohols, glycerin or propylene glycol are opt. added.

USE/ADVANTAGE - Synergistic antibacterial compsn. can reduce the required quantity of the extract.

In an example, 1kg of dried seeds of grapefruit was extracted with 5 L of ethanol for 24 hrs. and the extract was condensed to give about 25 g of prod. which was dissolved in 25 g of glycerin to give a mixt. (A). Polyglycerin laurate was added to the mixt. (A) at a rate of 0.2% to give a compsn. (B). The compsn. (A) and (B)

showed inhibitory activity against B. subtilis, Staph. aureus and Salm. typhimurium at concns. of 31.30 and 7.80, 3.90 and 2.0, and 15.60 and 7.8, respectively.
